

GUIDE TO PACKING LIQUIDS

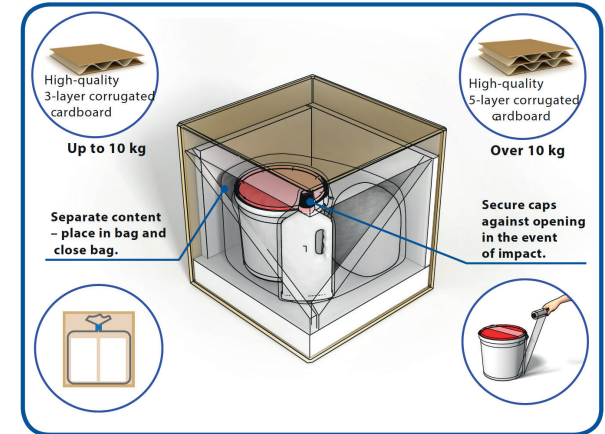

Forwarding risks in the PPL CZ system

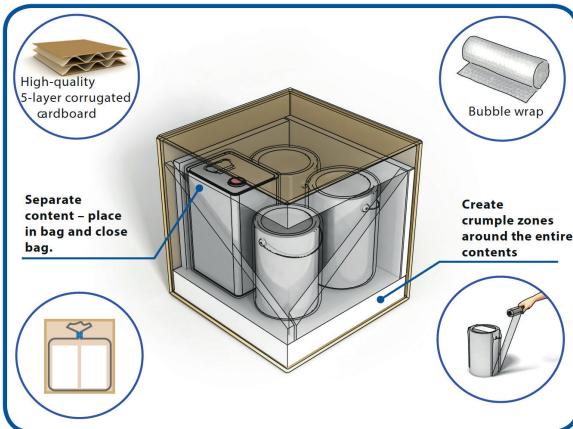

Automatic sorting lines sort up to 200,000 parcels per day! Adapt packaging to suit these automated lines. Risks of falling and impact!

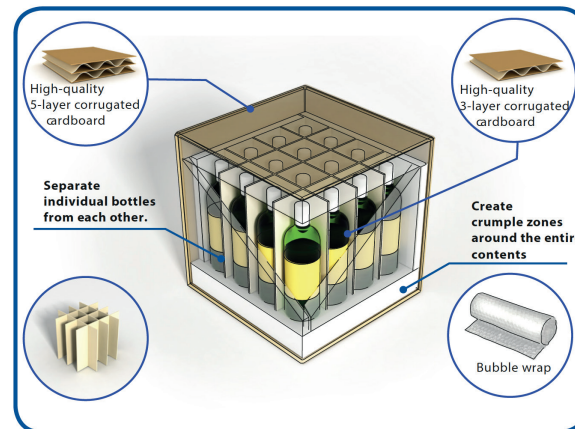

High risk of snap-on caps popping off!

Liquids packed in plastic packaging. Create sufficient crumple zones around the entire contents.

Liquids packed in cans. Secure caps against opening with adhesive tape or shrink wrap.

Liquids packed in glass containers. Secure contents against movement.

Guide to packing liquids:

1. Use high-quality packaging materials and boxes.
2. Secure caps with adhesive tape or shrink wrap.
3. Wrap each item in bubble wrap, etc.
4. Separate individual items.
5. Place the whole content in a bag/sack and close it.
6. Create sufficient crumple zones around the entire contents – thickest base + top.
7. Secure contents against movement.
8. The whole parcel must be strong and compact.
9. Test the parcel by dropping it from 60 – 80 cm (CSN EN 22248 a 24180-20).
10. The parcel must be able to withstand 5 times its own weight.
11. Mark with a handling label according to CSN EN ISO 780.
12. Secure authenticity of packaging with a highquality seal.
